

JUNYAN LU

PRODUCT & EXPERIENCE DESIGNER | AI PRODUCTS, INTERNAL TOOLS, COMPLEX WORKFLOWS

iamjunyan.lu@gmail.com | +86 187 9072 6607 | Portfolio | LinkedIn | Shanghai / Milan

Product and experience designer with a background in industrial design and product-service systems. I turn research on complex workflows into product opportunities, then use rapid prototypes and testing to validate internal tools, AI-enhanced products and early-stage directions.

EXPERIENCE

Segway-Ninebot | User Experience Research

May 2026 - Present

Design & Brand Center / Frontier Design

- Contributed to the web platformization of an internal design workspace, using AI-assisted prototypes to clarify requirements and move concepts toward pre-launch validation.
- Embedded in business-unit research projects, creating study materials, analyzing priority data, and synthesizing reports and internal readouts for design teams.
- Coordinated with design, research, and business stakeholders to frame usage scenarios and prepare user testing and feature iteration for the evolving internal platform.

DI Works | UX & Product Design Intern

Feb 2025 - Jul 2025

Milan, Italy

- Contributed to 0-to-1 design for YouFeed, owning the frontstage mobile experience across touchpoint entry, voice/text input, transcript review, and critical edge states, while supporting field testing.
- YouFeed deployments captured 1,000+ project responses across ISH Frankfurt and Giacomini contexts; this team metric does not imply independent ownership of backend analysis.
- Designed the core mobile WebApp flow for an NFC-based Digital Product Passport, connecting physical tags to digital content and improving trigger, guidance, and entry states.

Bosch Power Tools | UX Research Intern

Dec 2022 - Jul 2023

Shanghai, China

- Conducted 20+ interviews on workers' career development; built five personas, journeys, opportunity areas, and MVP concepts, then supported direction-setting through competitive analysis and cross-functional workshops.

Temimu Incubator | User Research Intern

Jun 2022 - Sep 2022

Shanghai, China

- Combined desk research, 10+ depth interviews, and two focus groups with urban adults aged 23-35, translating findings into market opportunities and strategic recommendations.

SELECTED PROJECTS

Sound Mirror | Independent Live Product

2026

Concept, interaction, visual design & build | Live v1.0

- Designed and built a live web product that turns eight A/B music choices into an explainable taste portrait, combining deterministic scoring, AI-enhanced language, graceful fallback, and exhaustive checks of 256 rule combinations.

Caffeine Check | Independent Live Lab

2026

Product definition, flow, MVP scope & working demo

- Designed and built a lightweight caffeine-intake tool; longitudinal use, rule boundaries, and health-context messaging remain unvalidated, so the current portfolio status is Lab.

EDUCATION

Politecnico di Milano | MSc, Product-Service System Design

Sep 2023 - Dec 2025 | 110/110 | Thesis: application and evaluation of AI tools in design workflows.

Tongji University | Bachelor's in Industrial Design

Sep 2019 - Jun 2023 | College of Design and Innovation.

SKILLS & LANGUAGES

Product & research User research, product discovery, service design, information architecture, rapid prototyping, usability testing

AI & tools AI workflow design, prompt prototyping, AI-assisted front-end prototyping, Figma, Rhino, KeyShot

Languages Chinese (native); English (IELTS 7, working proficiency); Italian (conversational)
